

Opytec

Heavy-duty hand cleaner

Features

High-quality, viscous hand wash soap for removing oily, greasy and encrusted dirt. Cleans hands thoroughly but very gently thanks to special washing substances and skin-friendly abrasives. The abrasive components loosen oily, greasy and encrusted dirt from the skin and absorb them. The lipid-replenishing substances protect and care for the skin. The pH value preserves the natural acid mantle of the skin. Fresh fragrance, skin-friendly and based on natural ingredients. Free of skin-irritating solvents. Abrasive components do not contain sand or wood particles. Dermatologically safe. Very economical in use. No clogging of effluents and drains, as with conventional sand paste. Opytec contains natural raw materials and has a high level of biodegradability. The packaging can be recycled completely.

Ingredients (INCI)

Aqua, Sodium Laureth Sulfate, Cocamidopropyl Betaine, Polyurethane, Bentonite, PEG-7-Glyceryl Cocoate, Glycerin, Sulfated Castor Oil, Polyethylene, Phenoxyethanol, Limonene, Styrene/VP Copolymer, Citric Acid, Aluminium Hydroxide, CI 42090, Sorbic Acid, Methylchloroisothiazolinone, Methylisothiazolinone.
pH value (concentrate): approx. 6

Application

For cleaning hands soiled heavily from grease, oil and encrustments, for instance in workshops, food-processing establishments, paint shops, industry and production sites, trade schools, car industry, etc. Removes synthetic and natural oils and greases, paint residues and food remains, pigments, etc.

Directions

Shake product after prolonged storage.

In the two-litre soft bottle:

Pull out plastic cap from dosing unit, do not twist off. Insert container into the ManoDos-soft dispenser with the dosing unit facing downward, push to the very back and close dispenser. When you push the dispenser lever the first time, the dosing unit locks into place with an audible click. Each environmentally-friendly two-litre PE bottle is delivered with a new dosing unit. This eliminates the need for periodical cleaning and maintenance.

Refillable dispensers suitable for viscous products:

Fill dispenser with Opytec. Avoid mixing with other soaps. Empty the dispenser completely at least twice a year and rinse carefully with warm water.

Manual twist-on dosing pump:

Twist dosing pump onto container. Pressing twice corresponds approx. to 2 ml. Clean dosing pump carefully with warm water inside and outside, each time you insert a new container.

Hand cleaning:

Apply approx. 2 ml of Opytec to dry hand and rub thoroughly. Moisten hands lightly and keep rubbing. Rinse well under running water and dry carefully.

Please find detailed printable instructions for hand cleaning at www.kiehl-group.com. For protecting your hands during and after work, we recommend products of the "marina KC series."

Hand Cleaning Disinfection and Care

Consumption

1-3 ml per hand cleaning

Packaging
